Subject: RE: Proteco: Cattle Remain Present on the Site (February 28- March 4, 2022)
Date: Monday, March 07, 2022 12:10:23 PM

Dan,

This information is very useful. Do you know how many cattle heads the crew observed last week (approximated)? Also, please, let me know if you are available on Thursday, March 10th, 2022 at 2:00 pm EST to discuss the Site Recon. Based on recent communications, it should begin in April 25, 2022.

Regards,

Zolymar Luna Díaz

Subject: Proteco: Cattle Remain Present on the Site (February 28- March 4, 2022)

Hello Zolymar,

Geosyntec observed cattle inside the Proteco Site fence this week. The cattle have remained away from the Site clearing machinery and personnel.

On Tuesday (3/1/2022), a group of approximately twenty (20) cattle gathered at the staging area gate. The field crew opened the staging area gate and the cattle left the Site on their own. The field crew stayed away from the animals and did not “drive” or “herd” the cattle from the Site.

The field crew discovered a broken wire in the south fence near the EC Waste office on Monday morning (2/28/2022). This broken wire was located in the same section of fence described in the previous weekly reports. The field crew

also discovered broken fence wires in the southwest section of the fence on Monday morning. The field crew repaired the damaged fence sections and installed additional fence posts to strengthen the wire. The attached photos show the damaged sections of fence.

We will continue to provide you with a livestock update once a week during the Site clearing task as long as the cattle do not cause a work stoppage. If the cattle do cause a work stoppage, we will call you immediately and notify you of the work stoppage. We will document the phone notification with an email. Please contact the livestock owner and have him remove the cattle from the Site. The Site gates are open (unlocked) during business hours to allow the livestock owner to enter and remove his animals.

Best Regards,

Dan Gainer, PG CSM
